

303® Fabric Guard Application Instructions

Strengthens and restores water repellency to outdoor fabrics.

303 FABRIC GUARD FEATURES

- Excellent water and oil repellency.
- Superior stain resistance and soil release characteristics.
- Controls fading and resists mildew formation.
- Does not alter color, feel or breathability of fabric.
- Environmentally safe (no ozone depleting solvents).
- Nontoxic and odorless when dry.

APPLICATION

Choose a warm day in full sun (above 70° F) and spray in a well ventilated area. Avoid heat, sparks, smoking or open flame during application (303 Fabric Guard is flammable until dry). Also avoid contact with skin and eyes (protective clothing is recommended). Spray until evenly wet, overlapping sprayed areas.

Before application, test the colorfastness of the material or carpet by spraying in an inconspicuous area and wiping the area while wet to see if the color transfers. Clean material to be treated and let dry completely before applying 303 Fabric Guard. Spray evenly holding the nozzle tip 8 to 12 inches from the material. Cure time is 12-24 hours depending on fabric and temperature. Reapplication will be needed depending on exposure to sunlight and weather conditions.

Avoid getting overspray on wood finishes, vinyl, plastics and metals. Any overspray should be wiped up immediately with a dry absorbent cloth.

Tips for New Fabric: During the fabrication process the factory finish can be worn causing the new fabric to “wet,” most commonly at the seams. To prevent or correct seam leaks, treat the seam with 303 High Tech Fabric Guard.

COVERAGE

A 16 oz. bottle of 303 Fabric Guard covers approximately 40-75 square feet on most fabrics. A gallon covers up to 600 square feet if applied with proper equipment (recommended use of a low volume air-less spray system equipped with even flat fan tip). Other applicators, such as paint sprayers and hand pumped garden sprayers, can be used but coverage diminishes. Expect greater coverage on lighter weight fabrics and less on heavier fabrics and carpeting.

303 Fabric Guard is endorsed by Glen Raven Mills for use on Sunbrella® fabric.
