
Shoulder Strap - Bags

Instructions

Materials Needed:

- Webbing
- Brass Ring
- Snap Hook

A shoulder strap makes it easier to carry heavy bags, and it is simple to add one to your bag. Just follow the steps below.

When you sew the ends of the bag in place, secure a loop of nylon webbing run through a 7/8 inch brass ring at each end of the zipper. The bag will be turned inside out. Push the loop with the ring installed down into the inside of the bag and sew over the two legs where they are sandwiched between the zipper and the round end piece of the bag.

When the bag is turned right side out, the rings will be available at both ends of the zipper. The strap itself can be attached to these rings using snap hooks.

Attach snap hooks to the ends of a long length of webbing to make the shoulder strap itself. The length of this strap is really personal preference. Cut it to length and slide the ends through the bails on the snap hooks. Fold over an inch or two at each end of the strap and sew the loops closed with a "Box-X" stitch.
